and on the root of which the dense abrous membrane is in good condition. Place this tooth in warm water; let it remain there until the tooth is saturated and the membrane softened, then carefully clean the crown of any tartar of other deposits. With an appropriately shaped and sharp cutting tool, rapidly revolving in the dental drill, a hole is cut out of the jaw in the right place, a little smaller than the root of the tooth selected. The tooth is now firmly pushed to its place, where in a very short time, without support, if becomes fixed and a part of the individual in whose jaw it has been implanted. Springfield Republic
